## UNigreen Webinar-Green Strategy

**Let's talk about UNIgreen's contribution to reducing the carbon footprint and promoting a sustainable future.**

On Thursday, 20 March, 2025, join us for an online event, from 10:00 to 12:00 CET with expert speakers and engaging discussions.

**[Registration](#)**

The ecological footprint enables the measurement of the environmental impact of human activities and represents the amount of biologically productive land and water areas required to support a specific population or an individual's lifestyle, considering the consumption of resources and the absorption of waste.

According to the **UNIgreen Green Strategy**, UNIgreen will implement an Ecological Footprint Evaluation of each partner in the consortium. In order to implement a participatory process to increase environmental and climate responsibility, the Alliance will annually inform the UNIgreen Academic Community, its Associated Partners and key stakeholders on the ecological footprint in each of the Alliance countries and the situation at European level, as well as on progress made by UNIgreen.

The UNIgreen WP6 team published Ecological Footprint Compensation Guidelines, which describe the methodology related to the Ecological footprint evaluation and carbon footprint calculation and compensation, as well as the initiatives aiming to increase environmental and climate responsibility. The methodology for the carbon footprint calculation was developed by colleagues from HEPL, UNIMORE, and SupBiotech using the experience from the U-green project. In order to compensate the carbon emissions generated by the mobility of staff and students, the UNIgreen Consortium aims to undertake a minimum of 25 tree-planting projects within the Ecological Footprint Compensation Programme by the year 2026. In order to ensure visibility, transparency, and effective communication with local communities about its green commitments, all this information will be displayed in the sustainability section of the UNIgreen website and upgraded annually.
